

Explaining the New Neptune Water Meters

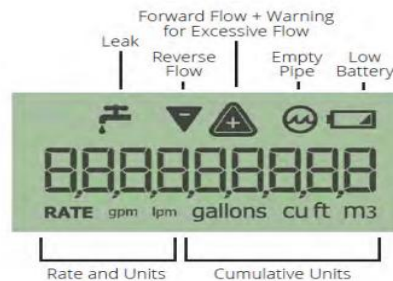

Meter Display:

The meter uses a nine-digit LCD to show consumption, flow rate, temperature and flag information.

LCD Panel:

Following is an example of the meter's panel.

▲ The LCD displays commas and decimals, to show digits in the tens position, ones position, tenths positions, and so forth. For example, registers display 1,234,567.89 which is 1,234,567 gallons.

Alarms:

 **Leak Indicator:** Your meter is detecting possible water flow when it should not be. A **flashing indicator** may mean a slow leak, while a **solid indicator** means water is continuously flowing. Check your faucets, toilets, and water lines for leaks.

 **Reverse and Forward Flow:** The meter has detected water flowing **forward or backward** through the meter.

  **Excessive Flow Warning:** means the meter is detecting **more water flowing through the meter than normally expected**.

 **Empty Pipe Warning: Low Flow/Pipe Not Full:** The meter may not be completely full of water, or there may be air in the water line.
